

**Michael J. Lawson**  
Senior Scientist  
National Wind Technology Center  
National Renewable Energy Laboratory

**Education**

B.S.	Virginia Tech	Mechanical Engineering	2005
M.S.	Virginia Tech	Mechanical Engineering	2006
Ph.D.	The Pennsylvania State University	Mechanical Engineering	2010

Advisors: Gary Settles and Eric Paterson

Dissertation: A Fundamental Study of the Airflow and Odorant Transport Phenomena of Canine Olfaction

**Experience**

**2018–Present: Senior Scientist**

Wind and Water Power Program. NREL. Boulder, CO

- Worked with a large multi-lab team to develop a blade-resolved wind farm simulation capability using the Nalu code, with the ultimate goal of developing an exascale wind farm CFD modeling tool.
- Supported the DOE Water Power Technologies office in (1) the development of the DOE Marine and Hydrokinetic Program Strategy, (2) in the development of DOE funding opportunity announcements, and (3) in the management of industry projects.
- Studied bat barotrauma from an aerodynamics perspective to help determine the likelihood that barotrauma is a significant contributor to wind turbine-related bat fatalities.

**2015–2017: Technical Advisor (Management and Operations Contractor)**

Wind and Water Power Technologies Office. DOE. Washington, D.C.

- Provided technical support for the Department of Energy Wind Program's Atmosphere to Electrons (A2e) program. A2e has the objective of using modern high performance computing and experimental techniques to optimize the performance of wind plants in order to significantly reduce the cost of wind energy.
- Collaborated with Department of Energy staff to develop a U.S. strategy for the development of wave and tidal, ocean, and river current energy technologies.
- Developed funding opportunities to support the deployment of utility-scale wave and tidal/ocean/river current technologies and supported the evaluation of applications.
- Provided technical support for Department of Energy funded National Lab and industry projects.
- Supported the economic analysis and evaluation of wave and tidal/ocean/river current energy technologies.

**2012–2014: Scientist**

Water Power Program. NREL. Boulder, CO

- PI on the team developing WEC-Sim, an open-source wave energy converter simulation tool that has been widely adopted by industry and academia.
- Co-PO on an LDRD project with the objective of developing WEC technologies that have the ability to utilize advanced control strategies to improve performance and reduce loads on wave energy converters.
- Designed and analyzed a wave energy converters and tidal/ocean current turbines using experimental methods and computational fluid dynamics (CFD) simulations.
- Performed a techno-economic assessment of wave and tidal current energy technologies for the United States.

**2010–2012: Postdoctoral Researcher**

Water Power Program. NREL. Boulder, CO

- Developed a new version of the axial-flow rotor optimization code HARP-Opt.
- Developed computational fluid dynamics (CFD) methods to simulate tidal current turbines.
- Developed a discrete vortex method code to simulate vertical axis turbines.

**2007–2010: National Defense Science and Engineering Graduate Fellow**

Gas Dynamics Lab and U.S. Navy Applied Research Lab. Penn State. University Park, PA.

- Studied the fluid dynamics and odorant transport of canine olfaction.

**2006–2007: Contractor**

Aerodynamics Division. BMW. Munich, Germany

- Performed vehicle aerodynamics research using CFD techniques.

**2005–2006: Graduate Research Assistant**

Experimental and Computational Combustion Lab. Virginia Tech. Blacksburg, VA

## Journal Publications
